

**Save the date: Registration opens on 17 November 2014**

**First SACSESS  
International Workshop**

**Warsaw, Poland  
22-24 April 2015**

**Towards safe and optimised separation processes, a  
challenge for nuclear scientists**

**In the continuation of the ACSEPT international workshop series \***

**This workshop will cover the following topics:**

- Actinide sciences for separation  
(including radiation chemistry of extraction systems)
- Separation process development & engineering
- Fuel cycle and waste management strategies

**Both in the field of aqueous separation and pyrometallurgy**

**Submit your abstract by 1 December 2014!**

**You can already express your interest by proposing oral contributions. Some  
of them will be selected as invited lectures.**

*\* The [first ACSEPT international workshop](#) gathered more than 120 participants in Lisbon in March 2010. The second was organised as a specific session of the ATALANTE 2012 Conference in Montpellier.*

*Thanks to the "International Workshop", SACSESS not only gives the floor to its "Young Generation" but also allows y to oumeet internationally renowned researchers.*

SACSESS is an EU collaborative project under the FP7 EURATOM framework and gathers 26 Partners. It aims at optimising chemical separation processes previously selected within the FP7 ACSEPT project by focusing on all the safety issues related to the industrial implementation of a chemical process involving actinides. In SACSESS, Education and Training is a key issue for preparing the next generation of actinide scientists.
